

Eurol Specialty Racing CV Joint Grease

High performance CV joint grease for racing applications

Beschreibung

Eurol Specialty Racing CV joint grease is a fully synthetic racing CV joint grease based on Eurol SYNGIS Technology. This additive technology ensures high power output and unmatched protection against wear in the most extreme conditions.

Developed for competition use. It has been approved for use in both Rzeppa-type joints and tripod joints. Approved for use in both inner and outer CV Joints. Eurol Specialty Racing CV joint grease has been successfully used in:

- BMW F80 M3 Competition endurance racing with JR Motorsport
- WTCR with Comtoy Racing

Gebrauchsanweisung

Clean the CV joint thoroughly using Eurol Swift Clean 110 Spray and a clean cloth.

Pack the CV joint carefully with fresh grease and seal correctly to prevent dirt ingress.

Note: Eurol Specialty Racing CV joint grease is not recommended for street use. In case of any application-related questions, please visit www.eurol.com/racing

Eurol Specialty Racing CV Joint Grease hat folgende Eigenschaften

Outstanding extreme pressure capability, providing emergency lubrication

Reduces friction, lowers CV joint temperature and increases top speed

Remains compact, does not fling out of joint, even at high RPM
