

Eurol Lube PL BIO Spray

Biodegradable lubricant reinforced with SYNGIS Technology

Description

Eurol Lube PL BIO Spray is a “dry” lubricant with Eurol SYNGIS Technology. Eurol Lube PL BIO Spray has been developed for non-drip, clean and durable lubrication of many applications where excellent creeping, penetration and anti-corrosion properties are required. It displaces moisture, resists water and loosens corroded parts. Thanks to the “dry” lubrication properties dirt and sand are not being picked up. Eurol Lube PL BIO Spray is especially developed to protect against extreme pressure and wear.

Eurol Lube PL BIO Spray is especially suitable for open lubrication points like e.g. joints, bearings, hinges and cables.

Eurol Lube PL BIO Spray contains partly bio-derived lubricant and is readily biodegradable.

Instructions for use

Clean and degrease parts thoroughly
Shake well before use
Apply a thin film
Allow the product to penetrate and dry
Remove excess product with a clean cloth

Eurol Lube PL BIO Spray has the following characteristics

- Partly bio-derived lubricant
- Readily biodegradable lubricant
- Excellent anti wear properties
- Excellent protection against corrosion
- Good water repellency
- Very good creeping and penetration properties
- Loosens corroded parts
- Gives a thin and “dry” protective lubrication film
- Does not attract dirt or sand
- Very low friction coefficient
